OTP — Local mein bypass: kyun aur kaise

RishteyZindagi.com · Developer guide · 22 October 2026

1. OTP kya hai aur website mein kahan aata hai?

OTP (One-Time Password) ek 6-digit code hai jo member ke e-mail ya mobile par bheja jaata hai, taaki pakka ho sake ki e-mail/mobile sach mein usi ka hai. Website mein OTP in jagah aata hai:

Jagah	Local mein band ho sakta hai?	Note
Naya account banana (Signup verification)	**Haan**	Setting: "Registration OTP verification"
Naye device / browser se login	**Haan** (alag setting)	Sirf `--all` ke saath ya admin panel se
Password reset, account recovery	Nahi	Hamesha code chahiye
Admin login / MFA, contact (e-mail/mobile) change	Nahi	Hamesha code chahiye

2. Local mein OTP bypass kyun karte hain?

1. **OTP bhejne ke liye asli vendor chahiye.** E-mail ke liye SMTP account (jaise Gmail/Zoho/SES), SMS ke liye Fast2SMS ki paid API key. Developer ke computer par yeh accounts aur keys nahi hote.
2. **Bina vendor ke code kabhi pahunchega hi nahi.** Signup form "Email OTP delivery is not configured" dikhayega aur account nahi banega. Phir aap profile, search, interest, chat, payment kuch bhi test nahi kar paoge.
3. **Asli keys local machine par rakhna risky hai.** Keys leak ho sakti hain ya galti se git mein chali jaayein, aur testing mein asli logon ko SMS/e-mail bhi ja sakte hain (paise bhi lagte hain).
4. **Isliye sirf local par** OTP ko bypass karte hain, taaki developer baaki poori website aaram se chala aur test kar sake.

> **Production (live website) mein OTP hamesha ON rakhna hai.** OTP OFF hone par naye accounts ka e-mail/mobile "unverified" rehta hai, jisse fake accounts ka khatra badhta hai. Live server par real SMTP ya Fast2SMS lagao aur OTP policy ON rakho.

3. Bypass kaise karein — 3 tareeke

Tareeka A — OTP policy OFF (sabse aasaan, roz ke kaam ke liye)

Signup par OTP ka step hi nahi aata, account seedha ban jaata hai.

```
# project folder mein terminal kholo
npm run dev:otp -- off            # signup OTP band
npm run dev:otp -- off --all      # signup + naye device login OTP dono band
npm run dev:otp -- on             # dono wapas ON

# ya pehli baar setup karte waqt hi:
npm run dev:setup -- --no-otp     # setup + signup OTP band
```

Yahi kaam admin panel se bhi hota hai:

1. `http://localhost:3000/admin/login` par Super Admin se login karo.
2. **Platform Settings** (`/admin/super/settings`) kholo.
3. Card **"Registration OTP verification"** ko **OFF** karo. Ek chhota reason likhna padega (audit log mein save hota hai). Save karo.

Tareeka B — Development mode (OTP screen par dikhta hai)

Jab OTP wala screen aur poora flow test karna ho, lekin e-mail/SMS na bhejna ho.

1. OTP policy **ON** rakho.
2. Super Admin se login karo, phir **Platform Settings** → **One-time passwords** → **Development mode** → **ON** → **Save**.
3. `/signup` par signup karo. Code wale screen par **"Show my verification code"** dabao. Code screen par aa jayega, use daal do.

Code sirf server ki memory se padha jaata hai, kahin e-mail, log ya store nahi hota. Yahi box new-device login aur password reset par bhi aata hai. Live site par (`NODE_ENV=production`) yeh route 404 deta hai, aur development mode production mein on hi nahi hota.

Tareeka C — Asli e-mail OTP local par (delivery test karna ho)

`.env` mein SMTP bharo aur OTP policy ON rakho:

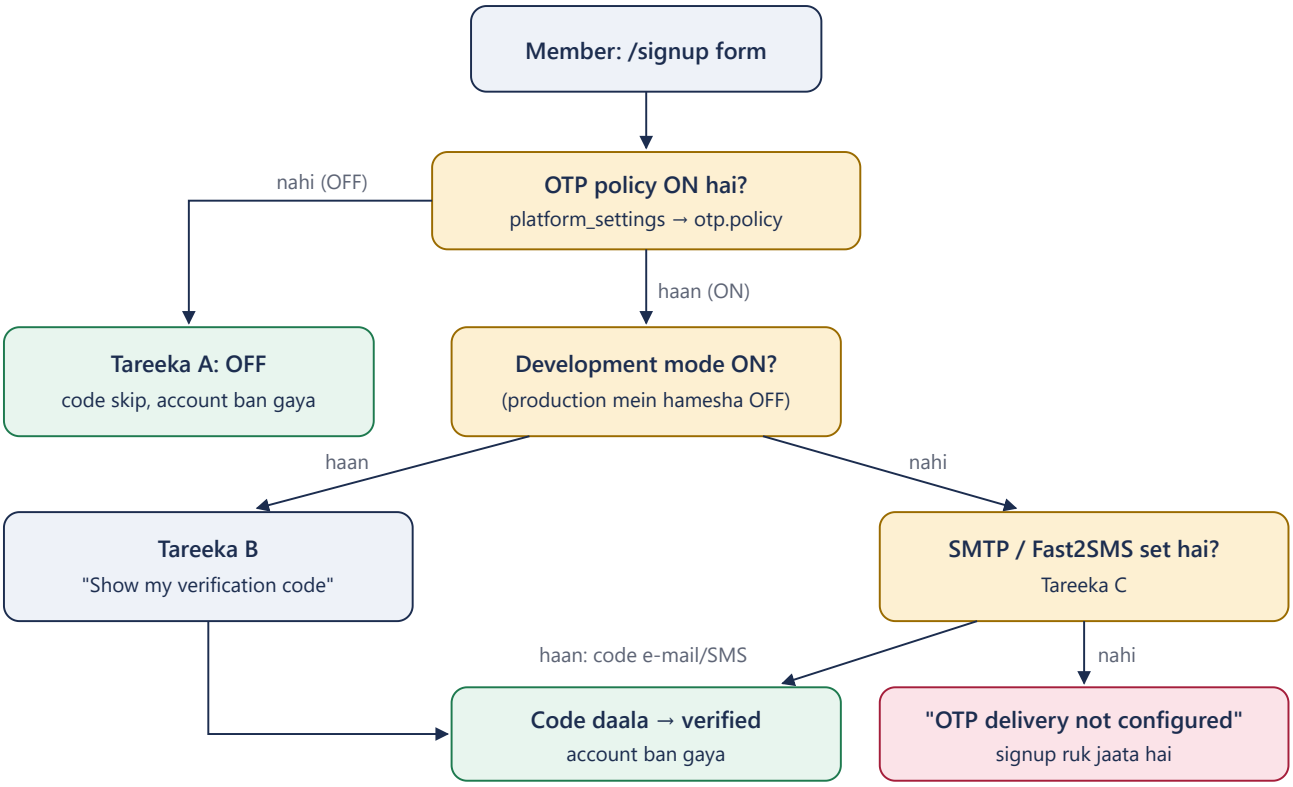

```
SMTP_HOST=...        SMTP_PORT=587
SMTP_USER=...        SMTP_PASS=...
EMAIL_FROM="RishteyZindagi <no-reply@your-domain>"
```

Local test ke liye Mailpit/MailHog (fake mail inbox) bhi laga sakte ho. SMS ke liye `FAST2SMS_*` variables, steps `FAST2SMS_SETUP.md` mein. Check: `npm run check:providers` aur `npm run dev:doctor`.

Kaunsa tareeka kab?

Situation	Tareeka
Roz ka development, jaldi signup chahiye	**A** — policy OFF
OTP screen / flow dekhna hai	**B** — development mode
Asli e-mail/SMS aa raha hai ya nahi	**C** — SMTP / Fast2SMS
Live website (production)	**Sirf C, policy ON** — A aur B kabhi nahi

4. Flow chart — signup par OTP kaise chalta hai

5. Zaroori baatein

- `dev:otp` aur `dev:setup` sirf local ke liye hain. `NODE_ENV=production` par yeh khud refuse kar dete hain.
- Setting database mein save hoti hai (`platform_settings` , key `otp.policy`), server restart ke baad bhi rehti hai. Har badlav audit log mein jaata hai.
- OTP OFF mein bhi password, account status aur rate limits lagte hain. Sirf code wala step hat-ta hai.
- OTP OFF mein bane accounts ka e-mail/mobile "unverified" rehta hai.
- Abhi kya setting hai, dekhne ke liye: `npm run dev:doctor` (read-only report).

> **Live par jaane se pehle checklist:** SMTP ya Fast2SMS lagao → `npm run check:providers` → Admin → Platform Settings: "Registration OTP verification" **ON**, Development mode **OFF** → ek asli signup karke dekho ki code aata hai.
